

# School Staff and Student Decision Tree

The following decision tree was created for families, students, and staff to better understand the steps that should be taken if an individual develops symptoms. Testing of unvaccinated close contacts (strongly encouraged) should happen 7–10 days into quarantine, or at onset of symptoms. A negative test for an unvaccinated close contact of a COVID-19 positive individual does not end the quarantine period

**Symptoms in a Recovered Individual:** If a person is positive for COVID-19, completes their self-isolation, recovers, and then develops new COVID-like symptoms within 90 days of their first infection, they should stay home until fever-free for at least 24 hours without fever-reducing medication and with improvement in symptoms. They may consider consulting their healthcare provider for additional guidance. If a person who was positive for COVID-19 more than 90 days ago develops new COVID-like symptoms, they should follow the same guidance as for someone who was never previously a case.
